

PANIMAYA PREETHI

MBA Candidate — Data Analyst

Chennai, India | +91 7904755495 | panimayapreethi@gmail.com | linkedin.com/in/Panimaya-preethi

PROFESSIONAL SUMMARY

MBA candidate with hands-on experience building data pipelines and dashboards using SQL, Python, and Power BI/Tableau, including a churn model (78.7% accuracy), statistical analysis identifying key satisfaction drivers in e-commerce data, and a retail sales dashboard. Skilled at turning raw data into clear insights.

TECHNICAL SKILLS

Languages & Databases: SQL (MySQL – Joins, Window Functions), Python (Pandas, NumPy, Matplotlib), Google BigQuery, Google Cloud Storage(GCS)

Visualisation & BI: Power BI (DAX, Power Query), Looker Studio, Tableau, Advanced Excel

Statistical & Analytical Methods: Hypothesis Testing, A/B Testing, EDA, KPI Analysis, Data Cleaning

Tools: Git, GitHub, Streamlit

EDUCATION

Master of Business Administration (MBA & PGPM)

2025 - 2027

ISSM Business School, Chennai

Bachelor of Business Administration (BBA)

2022 – 2025

PSG College of Arts and Science, Coimbatore

PROJECTS

E-commerce A/B Testing: Conversion Rate Optimisation | [\[GitHub link\]](#)

Aug 2026

Python | SQL | BigQuery | Looker Studio | Statistics | GCS

Designed and validated a two-proportion z-test on 294K+ e-commerce records via a GCS→BigQuery pipeline, testing a new landing page's impact on conversion. Identified a false-positive 18.94% conversion rate in a simulated 14-day "peeking" test; applied a Bonferroni correction and presented validated results with a 95% CI via a Looker Studio dashboard.

Customer Satisfaction Analysis in Brazilian E-Commerce (Olist) | [\[GitHub link\]](#)

July 2026

Python | Pandas | SQL | Tableau | Statistics

Analysed 99K orders across 7 merged datasets (Python/Pandas), finding delivery delay significantly predicts review score ($r = -0.27$, $p < 0.001$; 1-star orders arrived ~9 days later than 5-star). Identified underperforming product categories (2.5/5 vs. 4.09/5 platform mean) and a 0.6-point satisfaction gap between top and bottom states. Built a Tableau dashboard to surface these insights for stakeholder review.

Customer Churn Prediction & Retention Analytics | [\[Live App\]](#) · [\[GitHub\]](#)

June 2026

Python | SQL | Scikit-learn | Streamlit | Machine learning

Built a Logistic Regression churn model on 7K+ telecom customer records, achieving 78.7% accuracy; identified the top 20% highest-risk customers by predicted churn probability as the priority segment for retention outreach. Modelled the financial impact of a targeted retention campaign vs. blanket discounting, projecting a net profit of \$22,380 against \$5,620 campaign cost; deployed the analysis as an interactive Streamlit app.

EXPERIENCE

Business Analytics Internship | InterNova EduTech

June 2026

Engineered a competitor-tracking pipeline using Apollo.io, analysing and mapping data for 400+ target-market competitors (20–25 daily) to uncover strategic market-positioning gaps. Executed end-to-end B2B lead generation and target audience research, mapping hundreds of corporate opportunities to optimise cross-functional sales and outreach workflows.
